

HTML Interview Test - Holidays

Task

Convert the design image provided into a HTML and CSS static webpage as accurately as possible.

Useful Things To Know

- The design image provided is 2x scale
- The container width is 1100px
- The font used is “Be Vietnam Pro” on Google Fonts:
<https://fonts.google.com/specimen/Be+Vietnam+Pro?category=Sans+Serif,Display>
- We’ve used Font Awesome 5 Free for the iconography: <https://fontawesome.com/>
- The background image used in the jumbo is:
<https://www.pexels.com/photo/body-of-water-near-green-mountain-931018/>

For Bonus Points (Completely Optional!)

- Make the site responsive
- Add some fancy animations or unique details!
- Considerations for SEO and accessibility

Build Tools and Frameworks

You can use any build tools you’d like (but you may be asked why you’ve used them). However, avoid using any frameworks wherever possible, such as Bootstrap or Tailwind.

Main Considerations

We’ll mainly be using this test to get an understanding of how you go about building web pages and your thought processes behind them, and we’ll likely ask you quite a few questions about this. We’ll primarily be looking at your attention to detail and the structure of your HTML and CSS.

Hand In

Please provide a zipped file of all your code and assets, or alternatively a public Github repo. If possible, please host your web page online so we can easily access it later. You could use Github Pages to achieve this.
